WAIS-IV Clinical Use and Interpretation Lawrence G. Weiss, Donald H. Saklofske, Diane Coalson, Susan Engi Raiford, 2010-06-22 Published in August of 2008, WAIS-IV is the most widely used intelligence test for adults in the world. Substantive changes were made to the WAIS-IV from the WAIS-III leaving clinicians with questions as to how to use and interpret the measure effectively. Written by the creators of the new test, this book serves as the ultimate insider's guide to the new test, providing users with the kind of access to norms and data that would be unavailable to any subsequent book on clinical use of this measure. The book discusses the changes made between 3rd and 4th editions along with an FAQ and answers about use and interpretation. The reader is instructed how to interpret composite scores, and everything needed to use and interpret two entirely new composite scores: the General Ability Index (GAI), and the Cognitive Proficiency Index (CPI). This information does NOT appear in the manual accompanying the test. The second section of the book focuses on WAIS-IV use and interpretation with special clinical applications and populations, including with multicultural clients, in neuropsychological settings, with individuals experiencing psychological disorders, and with older adults. The editors and chapter authors have exclusive access to proprietary WAIS-IV data to run advanced analyses and provide information beyond what is offered in the WAIS-IV manual. Provides practical advice on scoring and administration Facilitates understanding WAIS-IV use with special populations Describes use of the WAIS-IV with WMS-II

WISC-IV Advanced Clinical Interpretation Lawrence G. Weiss,Donald H. Saklofske,Aurelio Prifitera,James A. Holdnack,2006-05-18 For both experienced psychologists and graduate students, WISC-IV Advanced Clinical Interpretation moves quickly through the essentials of WISC-IV interpretation and onto an insightful analysis of the major cognitive domains assessed by WISC-IV. It is the intention of the editors to raise the standard of practice from a simplistic 'test-label-place' model to a clinical model of assessing to understand and intervene. In the first chapter, the reader is presented with a comprehensive array of societal and home environment factors for which there is empirical evidence indicating their impact on the development of children's cognitive abilities, and ultimately their scores on intelligence tests. Subsequent chapters address issues related to the assessment of cognitive abilities that compose 'g', with special emphasis on the clinical correlates of working memory and processing speed from both neuropsychological and cognitive information processing perspectives. Each new chapter builds on material presented in previous chapters and progresses the reader purposefully through deeper levels of understanding of WISC-IV and cognitive assessment in general. Two chapters explicate the processing approach to interpretation that is the corner stone of the WISC-IV Integrated. A further chapter addresses the interpretation of WISC-IV findings within the context of other instruments as part of a full psychological evaluation. The final chapter provides an extensive case example of how to write psychological evaluation reports from a child-centered rather than a score-centered perspective that can have transforming impact on parents and teachers approach to the child.
