Management Information Systems: A Concise Study 2Nd Ed. Kelkar, Kelkar S. A., 2009-11-23 It is widely recognized that the knowledge of information systems is very much essential in today's business organizations to survive and prosper. This book, in its second edition, provides students with a conceptual framework to understand information systems. The focus of information systems (irrespective of the level of use of information) is on producing quality information needed to facilitate decision making. The objective of this book is to capture the material on information systems and organize it around a framework that offers a current and relevant knowledge based on information system by providing just the adequate amount of material in a concise format. The book is organized in three parts: Information systems basics, Managing with information and Managing information resources. Though the main structure of the second edition remains the same, the chapters have been updated and revised as per the recent development in the fields of information technology. Besides this, a new chapter is added to explain the concepts like e-business, Customer relationship management (CRM), Enterprise resources and planning (ERP) and Supply chain management (SCM), comprehensively. Intended for the students of computer applications (BCA and MCA) and management (BBA and MBA), and the undergraduate students of Computer Science engineering, the book is equally useful for the busy professionals who wish to grasp the essentials of management information systems, without attending a formal instructional course.

Management Information Systems Nirmalya Bagchi, 2010-01-01 Management Information Systems covers the basic concepts of management and the various interlinked concepts of information technology that are generally considered essential for prudent and reasonable business decisions. Management Information System Ramesh Chandra,2002 In the new digital age everything is destined to revolve around information technology, be it man or machine. People gather information directly by observing and experiencing events but as organizations become larger and more complex, it becomes impossible for management, particularly in the middle and higher levels, to observe or experience all operations. It is an information system using formalized procedures to provide managers at all level in all functions with appropriate information from all relevant sources to enable them make timely and effective decisions for planning, directing and controlling the activities for which they are responsible. This book offers a comprehensive analysis of management information system. It will serve as a complete reference tool to students, policy-makers and business managers.
